

Sprint Burndown

Nov 06, 2022 - Nov, 18 2022

We went through 66 points this sprint. This was a huge increase in points compared to the previous sprint's velocity as we completed 32 points in sprint 3. We doubled our velocity.

There was very slow progress the first week, due to studying for the CSCC01 term test taking a lot of our time. As a result, most of the stories were completed within the last 2 days after the term test, creating a steep slope in the burndown chart. This is our final sprint, and we were the closest to completing all the stories in the sprint backlog this time. We learned from our planning mistakes from previous sprints and assigned tasks more wisely, resulting in only 2 story points left unfinished by the end, as shown in the chart.
